Copy 6 of 7

12 March 1956

Joe -

Would you initiate a study under SN-95 which will determine the magnitude of resolution loss obtained when contact printing with a reversed negative as compared to normal contact printing - using thin base negatives. This is a follow-up on our discussions in this regard at the last Suppliers Meeting.

Byron will brief you further on this problem and will indicate results he has obtained in tests conducted here.

Thanks -

George
